2024 E-bike Trends

In late 2023 we see a meteoric rise in **subscription based models**. In the advent of rising living cost and inflation, younger demographic prefer a **subscription based product**, paying monthly for the ebike, and enjoy guaranteed services and repairs. In the upcoming year of 2024, Mexller will be prioritising in **developing low-entry cost city bikes** that can be easily maintained to provide maximum cost/value ratio

Aside from subscription bikes, mid-range ebikes also saw the consumer interest in **auto-gearing** rise. Combined with **belt transmission**, a mid-drive e-bike with these two features take the market by storm, attracting consumers who prefer the "E" over the "Bike". This naturally implies increased complexity in terms of mass production, of which we proudly have the **technical know-how** based on our portfolio of past clients.

Why Choose Us?

Expert in CE certification ; best anti-dumping solution

18 months warranty on electric components

Service points & warehouses in central Europe
